Samsung Galaxy Tab™

Need something that... does everything? This all-in-one 7-inch touchscreen device takes multitasking to the extreme. Read a book, listen to hot tracks, take a picture, video conference, watch a movie, email, or surf the Web, you can do it all-no desk required. The

Samsung Galaxy Tab satisfies all of your work and personal needs.

- » Includes Swype™, TouchWiz 3.0 and Android 2.2
- » Web browsing with flash
- » Email capable
- » Dual cameras
- » 1 GHz processor
- » Touchscreen
- » Bluetooth® Wireless
- » Memory card slot
- » GPS Navigation enabled

USA Mobility Wide Area Pagers Complete Communications for Baltimore Hospital

As a large health organization in Northwest Baltimore continues to grow and provide more services to the community, USA Mobility is there to ensure they have the wireless devices they need for effective and efficient communications.

While evaluating their existing wireless communications systems and devices, it was discovered one hospital in the organization was using an old in-house paging system in addition to USA Mobility wide area pagers. The in-house system limited the range of coverage for their doctors and provided slower messaging than the wide area devices. The customer wanted to upgrade their in-house system due to age, limited coverage and costly maintenance.

By switching the in-house pagers to USA Mobility wide-area pagers, the hospital has all their staff on one paging system while increasing both the coverage area and throughput times of messages sent to staff who were part of the former in-house system.

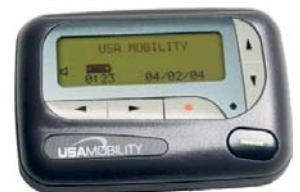

Ask a USA Mobility representative how wide area pagers can improve your facility's communications

Reliable Communications and Services Improve Communications for Massachusetts Police

When a Massachusetts police department's communication devices failed to work during an ice storm, many officers were left without a means of communication. Knowing that during emergencies, communication is critical to safety and protecting lives, the department began evaluating ways to eliminate the situation from occurring in the future. The department contacted USA Mobility for assistance because officers with USA Mobility pagers had continuous communications during the ice storm.

When the department met with the USA Mobility representative, they learned that not only could they gain the reliability and peace of mind that comes with USA Mobility's paging networks, but also take advantage of group paging. By having each officer carry a USA Mobility pager, the department would be able to send a single message to be received by all officers or a specific group of officers, a critical function during emergency communications.

Additionally, the department would be able to consolidate their costs under one bill and use USA Mobility's on-line service portal, My Account to help manage their account. Most importantly, this Massachusetts police department knows they have done their utmost to protect the lives of the citizens they are sworn to protect by improving their emergency communications.

Speak to your representative to find out how USA Mobility can improve the reliability and efficiency of your organization's communications.
