

IRM

Advance your messaging to the next level with USA Mobility's Integrated Resource Management System (IRM). The IRM is an on-site, real-time directory and messaging system designed to transform the way your facility communicates.

The IRM System seamlessly integrates wireless elements with your existing communications and IT infrastructure. The IRM System provides intelligent, universal connectivity to the world of wireless-enabled devices that your staff use every day.

- Securely message all communication devices from a single system
- Message logging and reporting tools
- Bypass of PSTN, eliminating access issues due to congestion during disasters
- Most reliable and secure output protocols.

Learn how the IRM can improve your communications. Speak with a USA Mobility representative for information.

Sprint Corner

- » Slide-out QWERTY keyboard
- » Camera
- » Voice activated dialing
- » Memory card slot
- » Touchscreen
- » Bluetooth® Wireless

Paging is Solution for Emergency Notification

For a national airline, communications is critical to ensuring safety as well as keeping flights on schedule. After evaluating their current communications, the airline learned its Technology Group had both coverage and service problems which needed to be corrected quickly.

The airline needed a device that provided consistent coverage throughout the facility. The device also needed to allow employees to both send and receive messages from the Technology group through the Remedy System.

The USA Mobility representative worked with the various departments to determine the best device to work with their system. With the ST902 two-way pager, the airline can communicate with full text messages to employees throughout the facility and surrounding areas. With the USA Mobility wide area network, the airline can be assured messages are received.

With USA Mobility pagers, the airline now has improved response times to issues.

Let USA Mobility provide the solutions that work with your systems and improve your communications.

USA Mobility Provides Communications During Emergencies

While we have witnessed many southern cities struggle with the after effects of flooding, emergency and rescue personnel require dependable communication to keep them informed of critical information. One thing that all disasters have in common is that they are immediately followed by an almost total loss of the ability to communicate with the outside world. Power is lost, telephone services are discontinued, and cell phone service is either non-existent or is so congested that it takes hours to get a call through.

Every year, companies and emergency planners face the problem of providing continued communication before, during, and after a disaster strikes their areas. More and more organizations and companies are turning to USA Mobility to provide continuous communications before, during and after any emergency.

USA Mobility Improves Construction Communications

For an asphalt and construction company in Ohio, providing accurate information and bids in a timely manner to customers is crucial to their success. While evaluating how business was conducted outside the office, the company realized they needed to improve the efficiency of their sales team.

Having worked with USA Mobility for over three years, the company contacted their representative for help. The representative learned the company would visit customers, return to the office to put a proposal together then return to the customer. This extra step in the process led to the company losing business, increased costs and reduced the number of appointments the sales team could schedule.

A wireless aircard from Sprint provided the best solution for the construction company. With an aircard, sales personnel can update paperwork in real-time and provide instant quotes and contracts to customers, all from their laptop.

Ask a USA Mobility representative about the solutions available to improve your company's communications.
